Containerveyor Conveyor System

Conveyor Manufacturers Australia

Conveyor Manufacturers Australia (CMA) is a leading developer of innovative conveyor technology.

We are all about time. We hate to see it wasted.

At CMA we support our customers to develop reliable, safe and productive businesses through maximising available time.

Be it an underground mine, a remote port, a snow-covered power station, a quarry, a conveyor that must operate near a local community, or even a steel mill handling a variety of bulk commodities, our solutions all aim to help create a step-change in performance.

CMA has a dedicated team of experienced professionals that understand key business drivers.

Importantly, we listen and respond.

Containerveyor

The Containerveyor system is completely modular and is designed to arrive on site in a “Plug and Play” format. Modules are fully fitted-out off-site and prior to shipment.

Once on site, modules are lifted from transport and installed in place, ready to accept rubber belting, and commence operating.

This modular approach saves the customer substantial time, cost and risk.

A wide range of options are able to be incorporated into Containerveyor Modules. Options may include: services; pipes; cables; communications; monitoring; lighting; fire suppression; walkways and other features.

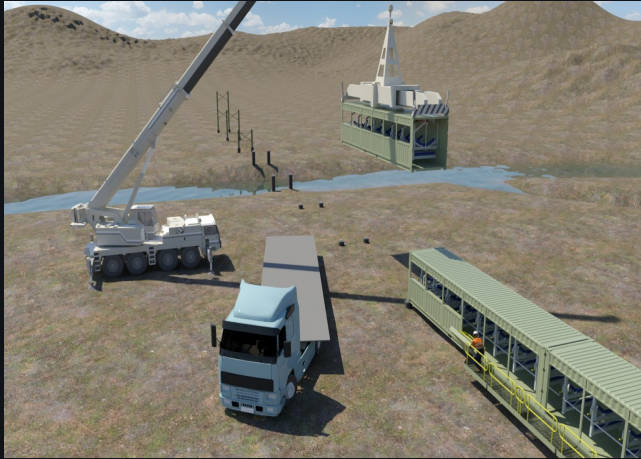

Benefits

The modular approach of the Containerveyor includes:

- Reduced cost
- Simpler and quicker installation time
- Reduced civil foundations and costs
- Re-usable and re-locatable
- Able to be adjusted to suit site needs
- Lower operating cost vs trucking
- Able to integrate other add-on features
- Improved environmental benefits (noise, dust, vibration)
- Ability to completely cover and/or bury
- Enclosed nature means is able to operate in all weather conditions
- Modular approach enables systems to be financed and / or leased.

modular.

The Containerveyor is easily installed with a crane or other lifting equipment.

Depending on site requirements, the Containerveyor modules can be installed directly onto the ground, or where required onto piles or footings.

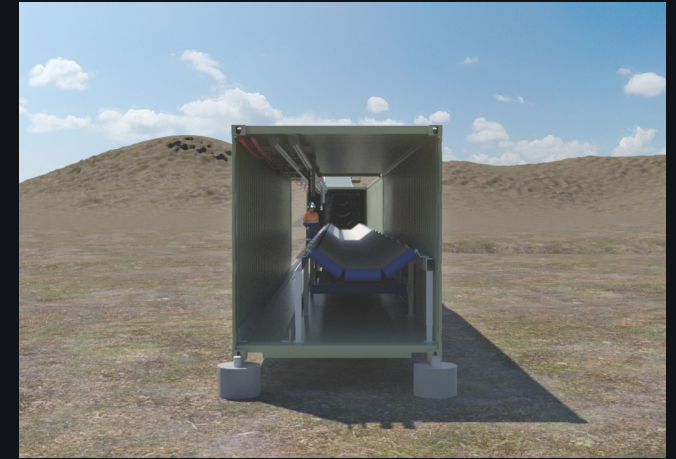

This simple modular process significantly reduces installation time and cost, and similarly reduces the number of personnel required to install the conveyor.

The Containerveyor can be supplied with an optional integrated external walkway and covering roof.

During transport, the walkway and roof form the sides of the Containerveyor module, and simply fold out upon installation.

This provides personnel with a safe, protected access to, and transport path along, the length of the conveyor.

Where a narrow-width belt is required, the walkway can be located internally.

The height available in the Containerveyor module also allows two conveyors to be installed vertically if desired.

Services, electronics and other installed equipment is all readily accessible from the walkway, offering safe, efficient and ergonomic installation and maintenance.

Application and Uses

The Containerveyor system is designed to be used in a wide range of industries and applications, and may include:

- Surface Mines
- Overland and transfer conveyors
- Stockyards
- Ports
- Agriculture
- Quarries
- Power Generation
- Metals Production
- Alternative to trucking

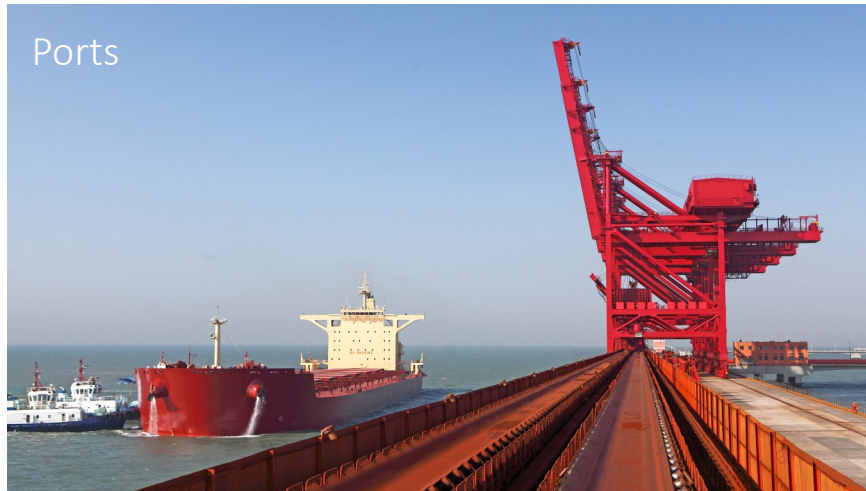

Stockpile Management

Overland Conveyors

Ports

Snow, Sand, Hot, Cold

CMA Partners

Conveyor Manufacturers Australia enjoys strong relationships with a number of significant world-wide partners.

These partners are manufacturers and suppliers of quality products and systems and manufacture to international quality standards.

These include:

- Dong Fang International Container (Jinzhou) Co. Ltd
- Liaoning Hualong Heavy Industry Co. Ltd.

quality.

Patents and Intellectual Property

CMA innovations, equipment, systems and processes are all secured through a range of international patent protections.

Additionally, CMA has pending rights worldwide in all Patent Cooperation Treaty (PCT) countries by virtue of its International PCT applications. Claims have been deemed both novel and inventive via the thorough examination processes by the PCT Authority.

Further, full patent filings (National Phase) have been made in a wide range of countries.
